Auditory Scanning – The Grid 2

Auditory scanning in The Grid 2 can be set up so that an auditory prompt using the private voice will be spoken when a cell is highlighted. If the cell is then selected the public voice will then speak the cell's contents.

In the User Settings select the Speech Settings and then the Private Voice tab. Choose the desired Voice and Speech settings for the private voice that will only be speaking the auditory prompts. You might like to have a different voice or volume for the private voice so that it is distinguishable from the public voice.

The Use right audio channel only option should not be selected.

In the Auditory feedback settings select Speak the description of the highlighted cell.

Once you have finished in the menu select OK at the bottom of the screen and return to the Gridset.
